Sherwin-Williams’ Bath Paint has been specially formulated to provide a mildew resistant finish in humid environments such as bathrooms, kitchens, closets, basements, garages, and laundry rooms. A tough, durable finish, it is suitable for use on interior walls, ceilings, and trim. Common household stains may be removed with nonabrasive cleaners. When applied according to label directions, Bath Paint:

- Will resist mildew growth for at least 5 years
- Will be moisture resistant
- Will not blister or peel
- Is fade resistant
- Will not yellow
- Will remain washable and scrubbable

**Color:** Many colors

**Coverage:** 350 - 400 sq ft/gal

**Drying Time, @ 77°F, 50% RH:** temperature and humidity dependent

- **Touch:** 1 hour
- **Recoat:** 4 hours

**Laboratory Flash Point:** N/A

**Finish:** 30-40 units @ 60°

**Tinting with Blend-A-Color:**

- **Base oz/gal**
- **Strength**
  - Extra White 0-5 100%

**Vehicle Type:** Vinyl Acrylic

**VOC (less exempt solvents):** 75 g/L; 0.62 lb/gal

**Volume Solids:** 36 ± 2%

**Weight Solids:** 49 ± 2%

**Weight per Gallon:** 10.4 lb

**Mildew Resistant**

This coating contains agents which inhibit the growth of mildew on the surface of this coating film.

---

**Surfacing Preparation**

**WARNING!** Removal of old paint by sanding, scraping or other means may generate dust or fumes that contain lead. Exposure to lead dust or fumes may cause brain damage or other adverse health effects, especially in children or pregnant women. Controlling exposure to lead or other hazardous substances requires the use of proper protective equipment, such as a properly fitted respirator (NIOSH approved) and proper containment and cleanup. For more information, call the National Lead Information Center at 1-800-424-LEAD (in US) or contact your local health authority.

Remove all surface contamination by washing with an appropriate cleaner, rinse thoroughly and allow to dry. Existing peeled or checked paint should be scraped and sanded to a sound surface. Glossy surfaces should be sanded dull. Stains from water, smoke, ink, pencil, grease, etc. should be sealed with the appropriate primer/sealer.

**Drywall**

- Fill cracks and holes with patching paste/spackle and sand smooth. Joint compounds must be cured and sanded smooth. Remove all sanding dust.

**Masonry, Concrete, Cement, Block**

- All new surfaces must be cured according to the supplier’s recommendations—usually about 30 days. Remove all form release and curing agents. Rough surfaces can be filled to provide a smooth surface. If painting cannot wait 30 days, allow the surface to cure 7 days and prime the surface with PrepRite Masonry Primer.
